

Portfolio Asset Allocation Report

Ankur Purakayastha | Student ID: CA/DF1/69743

ASSET CLASS SUMMARY

The portfolio is divided across three asset classes with varying risk profiles:

Asset Class	Amount (INR)	Allocation	Risk Level
Stocks	50,000	50%	Moderate
ETFs	30,000	30%	Low to Moderate
Cryptocurrency	20,000	20%	High
Total	1,00,000	100%	

DETAILED PORTFOLIO HOLDINGS

A breakdown of individual investments, their allocation, and investment rationale:

Asset Class	Investment	Amount (INR)	Weight	Rationale
Stocks	Tata Consultancy Services (TCS)	20,000	20%	Stable large-cap IT company with consistent cash flows
Stocks	Reliance Industries Ltd	20,000	20%	Diversified exposure across energy, retail, and telecom
Stocks	Apple Inc.	10,000	10%	Global brand with strong balance sheet and innovation
ETF	Nippon India ETF Nifty 50	20,000	20%	Broad Indian market exposure with low cost
ETF	Motilal Oswal Nasdaq 100 ETF	10,000	10%	Exposure to top global technology companies
Crypto	Bitcoin (BTC)	10,000	10%	Most established cryptocurrency and store of value
Crypto	Ethereum (ETH)	10,000	10%	Leading smart-contract platform and DeFi ecosystem

RISK ASSESSMENT

Each asset class carries a distinct risk profile as outlined below:

Asset Class	Risk Level	Key Risk Factors
Stocks	Moderate	Market volatility, sector downturns, earnings risk
ETFs	Low to Moderate	Index tracking error, liquidity risk, broad market decline
Cryptocurrency	High	Extreme price volatility, regulatory changes, cyber risks

INVESTMENT RATIONALE

Stocks

The equity component has two leading blue-chip Indian companies and one global leader. TCS and Reliance Industries provide stability due to their strong positioning and cash flow. Apple Inc. enhances international diversification and connection to the global consumer technology industry.

Exchange-Traded Funds (30%)

The Nippon India ETF Nifty 50 provides low-cost exposure to the broad domestic market capturing the overall growth of India. The Motilal Oswal Nasdaq 100 ETF provides concentrated exposure to the largest tech giants of the world over and above the domestic equity holdings.

Cryptocurrencies (20%)

Bitcoin and Ethereum are the two biggest cryptocurrencies in the world. While Bitcoin can be thought of as a store of value, Ethereum gives exposure to the growing DeFi and smart-contract ecosystem. The size of this allocation offers significant potential upside while capping the overall downside.

CONCLUSION

The portfolio employs an established asset allocation strategy. The strategy strikes a balance in domestic and foreign exposures, growth and stability as well as traditional and alternative asset classes. The 50-30-20 allocation strategy between Stocks, ETF and Crypto respectively satisfies all these conditions. In addition, that corresponds to the risk appetite of moderate investor.
